

DO VAN TUNG

FULLSTACK DEVELOPER

Ho Chi Minh City, Vietnam • +84 379 399 512 • dovantung1000@gmail.com • [Portfolio](#)

PROFESSIONAL SUMMARY

- 4+ years of professional experience in web application and enterprise software development.
- Strong expertise in JavaScript/TypeScript, with hands-on experience across React, Next.js, Vue.js, and Node.js.
- Experienced in building full-stack and enterprise systems, covering frontend, backend APIs, databases, authentication, and business workflows.
- Experienced in systems for e-commerce, KPI management, banking, and enterprise operations.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, HTML5, CSS3
Frontend	React.js, Next.js, Vue.js, Angular, React Native, Tailwind CSS
Backend	Node.js, Express.js, REST APIs, JWT
State Management	Redux, Redux-Saga, Vuex, Context API
Databases	PostgreSQL, Supabase, MongoDB, MySQL
Security	JWT, bcrypt, RBAC, Row Level Security (RLS)
Testing & Quality	Jest, ESLint, Prettier
DevOps & Tools	Docker, Git, SVN, Jira, CI/CD
Other	System Design, Performance Optimization, Webhooks, Payment Integration, AI-assisted Development

SELECTED PROJECTS

AI Database Assistant / OpenClaw Integration

AI / Backend Integration

A Node.js-based integration system that enables users to interact with database data through natural-language conversations with an AI agent.

- Designed a Node.js integration layer connecting an AI agent with database data through controlled backend tools.
- Implemented tool/function calling so the LLM can determine the appropriate database operation from natural-language questions.
- Developed reusable tools for querying, filtering, searching, and counting records.
- Implemented a multi-step workflow where the LLM selects tools and parameters, executes the operation, and generates a natural-language response from retrieved data.
- Designed the database layer to support multiple collections and separated LLM reasoning from direct database access through a controlled tool layer.
- Integrated the system with OpenClaw to enable conversational access to business data.

Technologies: Node.js, TypeScript, MongoDB, OpenClaw, LLM, Function Calling

Bakery E-commerce & Management System

Full-stack E-commerce Platform

A full-stack e-commerce and management platform supporting customer ordering, custom cakes, delivery/pickup, payment processing, and multi-role administration.

- Built both the customer storefront and multi-role admin dashboard using Next.js, React, and TypeScript.
- Developed RESTful backend services using Node.js and Express for products, orders, customers, vouchers, reviews, loyalty points, blog content, and store settings.
- Designed a relational PostgreSQL database using Supabase and implemented custom authentication and RBAC for admin, order staff, baker, and accountant roles.
- Designed an end-to-end order workflow: pending → confirmed → baking → delivering → delivered.
- Integrated VietQR and SePay webhooks to automatically verify bank-transfer payments by matching transaction information with order references.
- Implemented custom cake ordering, loyalty points, vouchers, image uploads, and transactional email notifications.
- Applied Row Level Security (RLS) while enforcing authorization through backend middleware.

Technologies: Next.js 16, React 19, TypeScript, Tailwind CSS 4, Node.js, Express 5, PostgreSQL, Supabase, JWT, bcrypt, VietQR, SePay, Nodemailer

KPI Management System

Enterprise System

A centralized enterprise platform for managing organizational goals and KPIs based on the Balanced Scorecard (BSC) methodology.

- Developed KPI creation, assignment, approval, cascading, and performance tracking workflows.

- Implemented dashboards and data visualization for monitoring KPI progress.
- Built real-time data synchronization and updates using Socket.IO.
- Implemented complex business rules for multi-level KPI assignment and approval processes.
- Integrated Excel-based data processing and reporting capabilities.

Technologies: Vue 3, TypeScript, Ant Design Vue, Vuex, Chart.js, Socket.IO, ExcelJS

Banking System

Enterprise / Financial System

A large-scale banking application supporting financial operations and internal business workflows.

- Developed and maintained frontend modules for complex banking workflows.
- Translated business requirements into scalable and maintainable application features.
- Integrated frontend applications with backend services and APIs.
- Implemented reusable components and state management for complex application flows.
- Focused on application maintainability, performance, and user experience.

Technologies: React.js, TypeScript, Next.js, Redux, Redux-Saga

PROFESSIONAL EXPERIENCE

Frontend Engineer

ISB Vietnam — Ho Chi Minh City, Vietnam | Jul 2022 – Present

- Developed and maintained enterprise web applications based on complex business requirements.
- Translated business requirements into scalable and maintainable application features.
- Built reusable components and application modules using React.js, Next.js, and TypeScript.
- Implemented state management and complex business workflows using Redux and Redux-Saga.
- Participated throughout the development lifecycle, including requirement analysis, implementation, testing, debugging, and maintenance.
- Researched and evaluated technologies to improve development efficiency and application quality.

Technologies: React.js, Next.js, TypeScript, Redux, Redux-Saga

Frontend Engineer

BUSO — Ho Chi Minh City, Vietnam | Oct 2020 – Dec 2021

- Developed and maintained web applications for enterprise business workflows.
- Implemented user interfaces and reusable components based on business requirements.
- Collaborated with team members to analyze requirements and deliver application features.
- Improved application usability, maintainability, and consistency through reusable frontend solutions.

Technologies: React.js, JavaScript, HTML5, CSS3

EDUCATION

Bachelor of Computer Science

VNUHCM – University of Science | Graduated: August 2020
